## **APPLICATION FOR A BUILDING PERMIT**

Before submitting your Building Permit Application, please review the following to insure the completeness of your application.

### Stormwater Management

Projects involving the cumulative addition of 1000 square feet or more of impervious coverage or earth disturbance of more than 5000 square feet will require a Stormwater Management Permit be completed, approved and paid in full prior to a building permit application being reviewed. Please note that swimming pools and most gravel surfaces are considered "impervious". All expenses associated with the Stormwater Management Permit application and review process are the responsibility of the property owner. More information on these expenses is found on the Stormwater Management Permit application packet.

### Plans and Specifications

Submit two (2) copies of specifications and plans drawn to scale, with sufficient clarity and detailed dimensions to show the nature of the work to be performed. When the quality of materials is essential for conformity to code, product information should be supplied. The building official may, at his discretion, waive or adjust the requirements for detailed plans when the work applied for is of a minor nature.

### Site Plan

Submit a site plan showing to-scale the size and location of all proposed new construction, all existing structures, and the distances from lot lines. Include all pertinent information such as street names, well and septic locations, wooded areas, steep slopes, etc. It should be drawn in accordance with an accurate boundary line. In the case of demolition, the plot plan should show all construction to be demolished and the location and size of all existing structures and construction that are to remain on the site.

### Engineering Details

The building official may require adequate details of structural, mechanical and electrical work; including computations, stress diagrams and other essential technical data to be filed. All engineering plans and computations shall bear the signature and seal of the engineer or architect responsible for the design. Plans for buildings more than two (2) stories in height should indicate how required structural and fire resistance rating integrity will be maintained, and where penetration will be made for electrical, mechanical, plumbing and communication conduits, pipes and systems.

No permit will be issued without required plans and specifications being submitted.

No permit will be issued to the applicant until the appropriate fees have been paid.

A Use & Occupancy Permit will not be issued until all inspections are completed
